

Resistance Decade Box

Model:RDB7

Resistance decade box
High accuracy to 0.1%

The box which contains the resistors of different values for estimating and comparing the resistance is known as the resistance box. The accuracy of the resistance box is very high. The main application of the resistance box is to control the specific value of current to flow through the circuit.

Feature

- .High accuracy to 0.1%
- .Economical, high performance high resistance decade for all laboratory
- .Plastic cabinet for better insulation
